

## Alcohol Bladder Care

Prior to using your new Pyroprotect Racing Cells/Saldana Racing Tanks alcohol bladder, there are some precautions to take into consideration:

- Wash your bladder with a mild soap (such as Dawn dish soap) and rinse it thoroughly with water.
- **DO NOT USE HOUSEHOLD CLEANING AGENTS.**
- **NEVER USE PETROLEUM** based additives, cleaners, or octane boosters- this WILL destroy an alcohol bladder.
- Use 100% Alcohol fuel only, i.e. methanol, ethanol (NOT E-85)
- Top lube can be used when premixed in a 1 part solution to 220 part alcohol ratio (1 qt solution to 55 gallons alcohol premixed).
  - **DO NOT** attempt to mix top lube in the fuel cell- mix well into fuel before putting into bladder.
- Use no more than 20 inch pounds torque when mounting the top plate.

To winterize your bladder, we recommend you:

- Remove remaining fuel.
- Wash your bladder with a mild soap (such as Dawn dish soap) and rinse it thoroughly with water.
- Make sure the bladder is completely dry.
- Close it up.
- Amorall can be applied to the outside of the bladder.
- Store in a climate-controlled area.
